

VLT scientific usage

VLTI PIs

- 205 PIs (up to P90);
- 137 PIs with more than 1 program (recurrent users);
- from 22 countries;
- many 1st time users
- many more astronomers indicated an interest (UC poll)

Number of requested nights

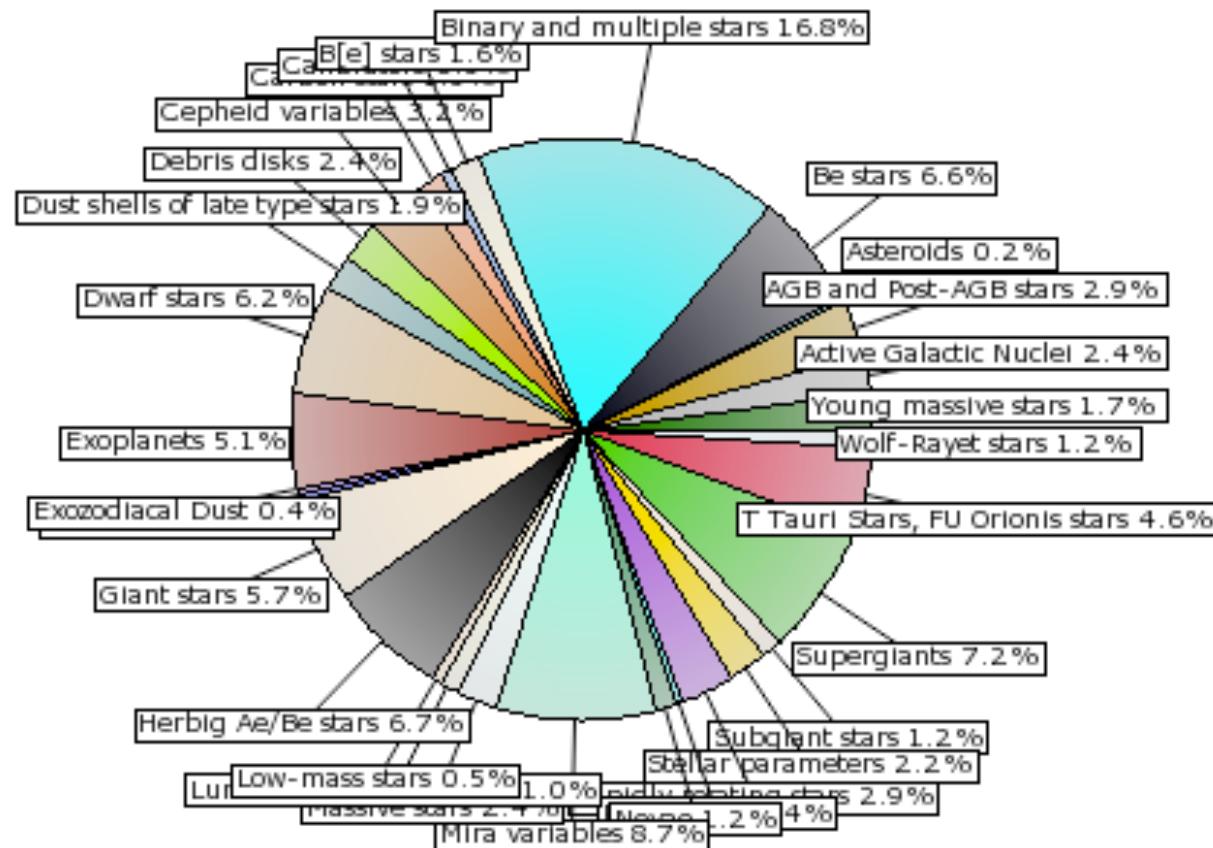

Qualitative assessment on proposals

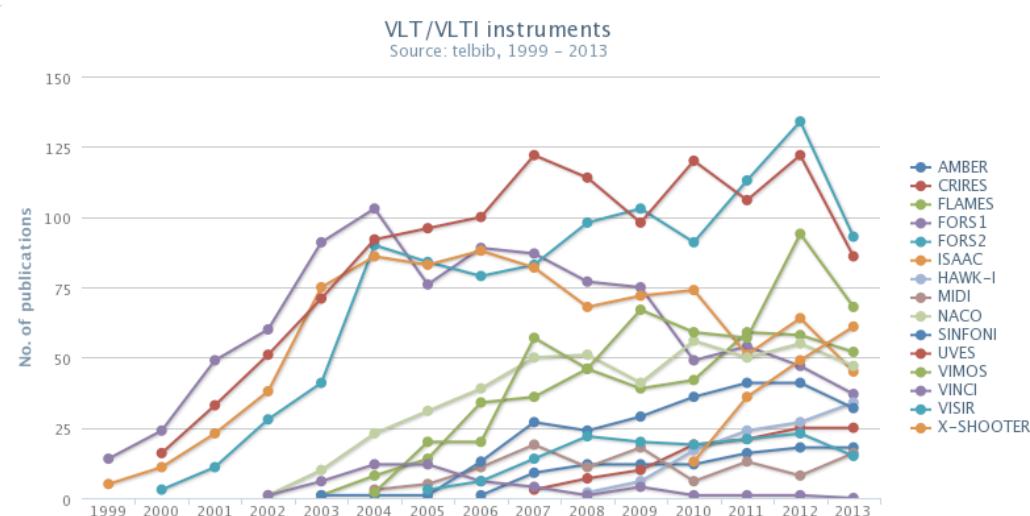

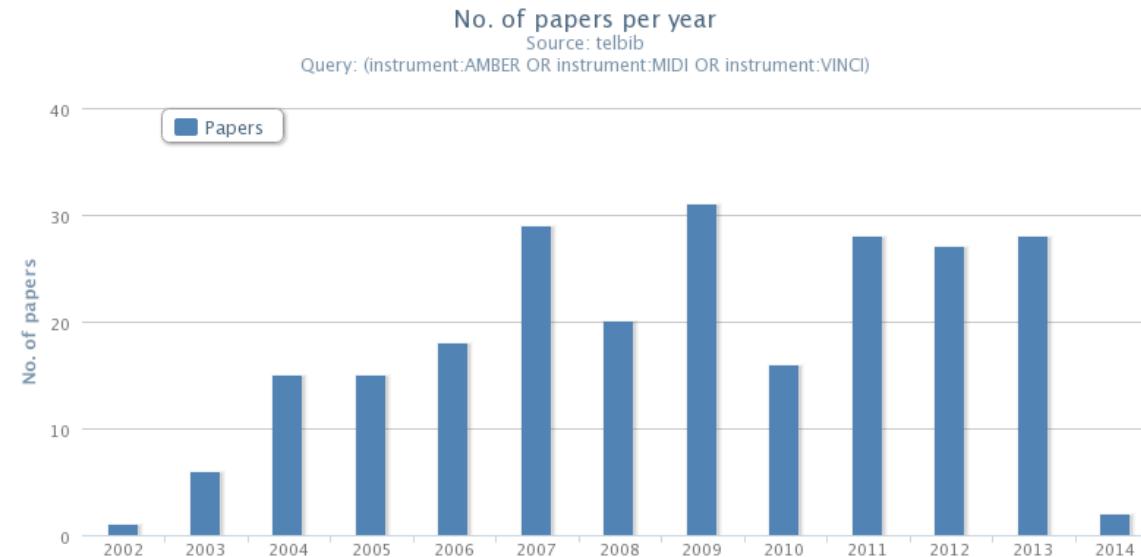

- ◆ Not a lot of Large Programs
- ◆ Not a lot of Filler programs
- ◆ A significant
- ◆ Limited number of AMBER+MIDI proposals
- ◆ Even lower number of VLT+VLTI proposals
- ◆ Nando Patat: VLTI proposals usually have lower ranking on average than VLTs (lack of representativity in OPC)
- ◆ Pressure factor healthy (~4-5) but biased by scheduling problems.

An analysis of interferometric high impact papers

- ◆ Papers only published from 2003-2013 were considered
- ◆ This format means recent awesome papers do not show up

Age before Beauty

AGNs:

- Jaffe, W.; Meisenheimer, K.; Röttgering, H. J. A. et al. 2004, Nature, 429, 47 [The central dusty torus in the active nucleus of NGC 1068 \(238 cit.\)](#)

Conclusion

- ◆ Very few papers over 100 citations (8), one (1) over 200
 - ◆ Context:
 - *For 5 year-old astronomy papers, #1 (#100) most cited paper will have ~1000 (~125) citations.*
 - *For 10 years-old papers, #1 (#100) -> 2000 (200) citations*
 - ◆ Survey or “synthesis” papers do better in general
 - ◆ Single object papers rarely show up unless open new band (or spectral resolution) or solve
 - ◆ # of Nature/Science papers: 6 or 7
 - ◆ 3 VLTI, 1 NPOI, 2-3 CHARA
 - ◆ 2xYSO, 1xAGN, 2xRapid rotator, 3x Imaging
 - ◆ Surface brightness relations, AGN and YSO papers seem to be areaas having largest integrated effects
 - ◆ Decade of Change:
 - ◆ New facilities turned-on: CHARA, VLTI
 - ◆ Closures: PTI, IOTA, COAST, GI2T, Keck-I, (ISI)
